

Maximize Value

On-Net to Off-Net Calling

Save on calls made from your PVN network to any phone, anywhere in the world, including:

- Satellite offices not on your PVN network
- Key business contacts (supply chain vendors, customers, etc.) not on your PVN network

As an added bonus, you can save even more by making international long distance calls at local rates wherever you have a PVN presence.

1. Caller dials PSTN phone number.
2. Max gateway sends call request message to PVN server.
3. PVN server authorizes call.
4. Call is forwarded to the Net2Phone platform where the enhanced services application is determined. The Net2Phone gateway then delivers the call request.
5. Call terminates at destination phone.
